A Saint-Gobain Brand

Saint-Gobain

Performance Plastics

Pressure-Sensitive

Adhesive Tapes

Pressure-Sensitive Adhesive Tapes

ADHESIVE SYSTEMS

ACRYLIC (A)

Acrylic adhesives perform in continuous operating temperatures from -40 °C to +177 °C. Benefits include exceptional solvent resistance, excellent adhesion to metal, superior weathering and aging characteristics. Acrylics have an excellent shelf life and when exposed to elevated temperatures their ability to wet-out improves thus increasing both adhesion and tack properties. Acrylic adhesives will generally thermoset when exposed to heat. The adhesive will then exhibit increased strength and improved thermal capabilities.

RUBBER (R)

Rubber adhesives impart high tack and shear characteristics. These adhesives perform in continuous operating temperatures from -18 °C to +163 °C. Rubber adhesives can be specially blended to manufacture a broad range of adhesion performance from a low adhesion of 0.3 N/cm to high adhesion of 6.6 N/cm. Most rubber adhesives will thermoset or harden on exposure to heat and remain set regardless of subsequent temperature cycles. Some rubber adhesives are designed to be non-thermosetting at recommended dwell times and temperatures – these are indicated in the tables.

SILICONE (S)

Perfect for extreme temperature applications, silicone adhesives perform in continuous operating temperatures from -73 °C to +260 °C. Silicone based adhesive systems exhibit good chemical resistance, retain electrical properties and remove cleanly with little or no residue.

BACKING SUBSTRATES

FILM-FEP

FEP film is used for applications requiring optical clarity, quick release, and abrasion resistance. FEP film applications include high temperature coil and capacitor wrapping, composite bonding, masking, and conveyor release linings.

FILM-POLYESTER

Polyester films have excellent dimensional stability, high tensile, tear and impact strengths and ultimate elongation up to 120% of its original dimensions. These films exhibit low water absorption and good resistance to oils, greases, strong acids, and organic solvents. They also retain electrical properties, dielectric strength and dielectric constant in continuous operating temperatures from -73 °C to 177 °C. Applications include transformer and capacitor wrapping, printed circuit board fabrication, splicing tapes, composite bonding protection and low-cost masking.

FILM-POLYIMIDE

Polyimide films are employed because of their extreme heat resistance. Service temperatures range from -73 °C to +260 °C. These flame retardant films exhibit high tensile strength and conformability, good solvent resistance, excellent dielectric strength and good abrasion resistance. Polyimide tape applications include electrical insulation, capacitor, transformer, and coil wrapping, electronic assembly and wave solder protection.

FILM-PTFE

PTFE films provide a conformable release surface and exhibit a remarkably low coefficient of friction and non-stick properties. PTFE films have high temperature resistance and are virtually unaffected by all chemicals. At elevated temperatures, PTFE film retains excellent tensile strength. Continuous service temperatures range from -73 °C to +260 °C. Film applications include high temperature coil and capacitor wrapping, composite bonding, masking and conveyor release linings.

FILM-RULON®

RULON films offer superior abrasion resistance when compared to conventional PTFE films. Service temperatures range from -73 °C to +260 °C. In rotating bearing tests, RULON provided a 500 fold increase in wear resistance over standard PTFE. Applications include bearing liners, chute and guide rail coverings.

FILM-PE UHMW

UHMW polyolefin film tape provides anti-stick and high abrasion resistance properties for application temperatures ranging from -73 °C to +107 °C. Applications include bearings, chute and guide rail coverings.

GLASS-CLOTH

Glass cloth offers excellent abrasion resistance and mechanical properties, as well as high tensile strength and extreme temperature resistance. Service temperatures range from -73 °C to +260 °C. Highly conformable and flexible, glass cloth has the unique ability to absorb insulating varnishes, which makes it an excellent choice in the electrical market. Applications include electrical insulation, coil and motor wrappings and general industrial applications.

GLASS-PTFE

PTFE coated glass fabrics provide dimensional stability, high tensile strength and edge tear. Continuous operating temperatures range from -73 °C to +260 °C and the coating offers better abrasion resistance than uncoated glass cloth. The PTFE surface offers quick release and chemical resistance characteristics. Anti-static PTFE coated glass yields improved thermal conductivity and static dissipation. Available with silicone or acrylic adhesives, PTFE glass applications include heat sealing, PVCU welding and low friction release surface liners for conveyors.

GLASS-SILICONE

Silicone glass provides temperature resistance from -73 °C to +260 °C and exceptional tensile strength and abrasion resistance. Applications include thermal spray, grit blasting, electrical and thermal insulation gaskets, heat sealing and diaphragms.

GLASS-FOIL

For applications requiring higher tear and tensile strengths, woven glass fabric laminated with aluminium is available. Applications include thermal spray and electrical insulation. Service temperatures range from -73 °C to +260 °C.

FOILS – ALUMINIUM AND COPPER

Aluminium and copper foil tapes offer high conformability, conductivity, and reflectivity at elevated temperatures. Continuous service temperature range from -73 °C to +260 °C. Applications include aircraft repainting, EMI/RFI shielding, and electroplating.

PAPER

Paper tapes are designed to provide high temperature and excellent solvent resistance for wave soldering, printed circuit board masking and hot air levelling applications. Service temperatures range from -73 °C to +260 °C.

Strip-N-Stick®

(SILICONE RUBBER)

Strip-N-Stick tape provides all the benefits of silicone rubber in an easy to apply, pressure-sensitive adhesive tape. Available in closed-cell sponge, low-density foam, or solid silicone, these products offer superior service life, excellent conformability and flexibility, low-compression set and high adhesion to a variety of materials. Service temperatures range from -73 °C to +260 °C dependant on the adhesive. Available with silicone or acrylic adhesives, Strip-N-Stick tape is excellent for high and low temperature gasket applications, cushioning, thermal insulation, electrical isolation, and vibration dampening.

RELEASE LINERS

FLUOROSILICONE

This release liner incorporates advanced release technology for use with silicone adhesives. As a flat, die-cuttable liner, it has exceptional release properties, making it an ideal choice for small or complex parts.

POLYETHYLENE

These thin release liners not only conform well to tape, but slit and release easily, making them a sensible choice for die-cutting. Available with acrylic or rubber adhesive systems, a smooth blue release liner is standard on most acrylic-adhesive pressure sensitive products.

PVC

A general purpose release liner, PVC conforms well to tape and protects the adhesive during handling. Although these liners have good release properties and slit well, they are generally not used for die-cutting. Only available with silicone adhesive tapes, a yellow liner is standard. Corrugated liners are standard on most PTFE coated fabrics, whilst dimpled liners are used on the majority of thermal spray tapes.

PAPER (COATED)

Paper is the ideal choice for die- and kiss-cutting. They have the advantage of lost cost and excellent release characteristics. Available with silicone rubber and acrylic adhesive systems, these beige release liners are specially treated to ensure excellent release properties.

CUSTOM TAPES

As a materials innovator, Saint-Gobain Performance Plastics specialises in manufacturing unique products to satisfy customer needs. While this catalogue details many of our standard pressure sensitive adhesive tapes, Saint-Gobain also offers custom tapes to meet specific applications or customer requirements.
